^{***} Re-Admissions targets have now been changed to:

Trust Balanced Scorecard - March 2012

Commentary on Patient safety and Quality & Clinical Strategy - *David Fluck, Interim Medical Director*

The Crude Mortality Rate has increased from 1.78% in February to 1.94% in March, suggesting a flat mortality rate from December and a year end crude mortality rate which has not changed greatly from last year (1.66% against 1.60%). The HSMR finishes the year at 99.2 but this will undergo a benchmarking process and Dr Foster has informed me that this will rise to 110. This is being driven by our palliative care coding which is nationally one of the lowest at 5 against a mean of 100. This is being investigated. Looking at table 2.1, the increase in crude mortality rate reflects an increase in crude mortality within Medicine whereas other specialties have remained static.

The mortality from hip fractures has settled to 3.1% (with an end of year rate of 6.4%) with the proportion operated on within 36 hours rising back to 94%. There was a rise in the number of significant falls with injury which finished at a similar level to last year.

Emergency admissions were again lower this month 1802 from 1853 – in keeping with our drive to meet the emergency cap which we achieved at end of year – although the complexity of these patients appears to be greater than last year. In addition the GP elective referrals are lower than planned for the year: 90 864 rather than the ambitious 98 833, with market share being maintained. This suggests that some of the demand management strategies in primary care are working. The LOS fell marginally from 5.52 to 5.43 for emergency patients with bed occupancy rates improving slightly.

Trust Balanced Scorecard - March 2012

Commentary on Workforce - Raj Bhamber, Director of Workforce and Organisational Development

2-01/02 At 31 March 2012, the establishment **remained at** 3266 WTE. The forecast for 31 March 2012 was to achieve 3252 WTE, a net reduction of 29 WTE from the establishment of 3295 at 1 April 2011.

2-03/04 During the year a reduction of 100 WTE has been achieved; funded growth was 64 WTE. Adjustments in year of 5 WTE for externally funded therapy student posts, and a reinstated CIP of 8.97 WTE in Medicine have reduced the net reduction to 29 WTE for the year. The financial saving from the WTE linked CIPs for the year has been confirmed as £2,662k, achieving the forecast of £2,540k.

2-05 The vacancy rate **increased slightly** from 9.5% to 9.6% at the end of March, within target for the year.

- 2-06 The use of agency staff **increased** by 3 WTE in March, above target for the month. At year end the average monthly use for the past 12 months was within target.
- Medical agency **decreased** by 1.9 WTE to 19.1 WTE,
- Allied Health Professionals decreased by 1.0 WTE to 0.8 WTE,
- Admin & clerical staff decreased by 0.5 WTE to 0.6 WTE,
- Qualified Nursing agency **increased** by 4.9 WTE to 31.1 WTE.
- Unqualified Nursing agency **increased** by 1.9 WTE to 21.9 WTE In March the level of nursing & HCA agency use increased to 53 WTE, however in April due to a combination of new starters filling vacancies (34 new nurses/HCAs joined trust from February to March), and increased weekly controls, this has reduced (to average 44 WTE in month to date).
- 2-07 The use of bank staff increased by 5 WTE, remaining within target for the

- 2-08 Turnover (number of leavers during previous 12 months expressed as percentage of the workforce) **increased** to 14%, remaining above the target of 12% since August 2011. The number of staff retiring increased from 3 in February to 21 in March, with retirements accounting for 40% of leavers.
- 2-09 Stability (percentage of the workforce with more than one year's service) has **decreased** to 85%, below target.
- 2-10 The sickness rate **decreased** to 3.14% in February, with the year to date average below the target of 3.25%.
- 2-11 The number of staff recorded as having an appraisal **increased** to 94.2%, highest for the year and higher than the outturn for 2011/12.
- 2-12/2-13 The ratio of consultants per bed **stayed the same**, remaining above target. The ratio for qualified nurses per bed **increased** remaining within target.
- 2-14 The Trust achieved a response rate of 63.6% in the national Staff Survey This represents the highest response rate from acute Trusts using the Picker Institute. The survey results indicate that the Trust has not achieved the target to have more than 50% of scores above average. Listen, plan, act sessions will be held with staff to focus on what improvements can be made in both immediate and longer term. A separate paper will be considered by the Board at the April 2012 meeting.
- 2-15 Numbers have **not increased** significantly for leadership programmes this month due to the continued focus on mandatory training. 451 staff have undertaken a leadership programme during the year.
- 2-16 Equip Bronze Training did not take place in March and this indicator has not achieved the revised target of 100 at year end, although has increased the numbers trained from the previous year. The training will be incorporated with leadership training in 2012/13.
- 2-17 The mandatory training compliance rate **increased** to 73%, higher than the target of 70% by 31 March 2012, and this has increased to 75% by 18 April 2012. Action plans are in place to address the outstanding 25% to achieve full compliance by 31 July 2012.

Trust Balanced Scorecard - March 2012

Commentary on Finance and Information - *John Headley, Director of Finance and Information*

Please note that Month 12 finacial figures are provisional, but not expected to change materially as a result of the year end exercise.

- **4-01** The full year FRR was 3, in line with our plan, although based on an underlying FRR of 2.8.
- **4-02** Income performed strongly in March, bringing full year income to £227m, 1% up on the previous year.
- **4-03 / 4-04** EBITDA was £2.7m down on plan at £14.7m and surplus £1.1m down at £1.0m although both were in line with the revised forecast. Operational pressures, CIP shortfall and non pay overspends all contributed to the reduced financial performance.
- **4-06** Cash balances of £16.1m were healthy.

- **4-08** Elective ALOS has decreased compared to last month however remains steady. Activity levels for Elective Inpatient activity have increased significantly this month.
- **4-09** Non- Elective ALOS has also decreased, although the full year average of 5.4 days is 0.6 days longer than planned....a major driver of operational and financial pressures.
- **4-10** Outpatient DNA rates continue to decrease, hitting 6.6% in the month. This brings the full year figure to 8.5% a major improvement on last year's 10.6%.
- **4-12** Theatre Utilisation continues to stay at a consistent level. The Excellence in Theatres project has increased efficiencies by improving operational TCI processes, creating standard operating procedures for list bookings and cancellations and also by improving communications between booking, Surgeons and the Division.

	Descriptions	Denominator:	Numerator:	Calculation:
	Annual Threshold 11/12			
1-01 Standardised mortality (Relative Risk)	82 The HSMR is a standardised measure of hospital mortality devised by Professor Sir Brian Jarman of Impential College London, and published every year by 10 Foater in the Hospital Guide. It is the observed number of in-hospital spelisl resulting in death divided by an expected figure, for a basket of 56 diagnoses which represent 80% of hospital mortality in England. Day cases are excluded unless the patient died. The expected figure is derived from a logistic regression model which adjusts for case-mix factors.	Expected number of in-hospitals deaths derived from logistic regression, adjusting for factors to indirectly standardise for difference in case-mix for the 56 diagnosis groups. Adjustments are made for: Sex Age on admission (in five year bands up to 90+) Admission method (non-elective or elective) Socio-conomic deprivation quintile of the area of residence of the patient (based on the Cartastra Index) Primary diagnosis (based on the Clinical Classification System - CCS group) Co-morbidities (based on Charlos Socio) Number of previous emergency admissions Year of discharge (financial year) Palliative care (whether the patient is being treated in specialty of palliative care) Exclude cases Daycases (where classpat = 2 in the first episode)	All spells culminating in death (method of discharge as death (IDISMETH-4), defined by specific diagnosis codes for the primary diagnosis of the spell. 56 diagnosis groups which contribute to 80% of in-hospital deaths in England.	The ratio of the observed number of in-hospital deaths to the expected number of deaths, multiplied by 100
1-02 Crude mortality (Died in hospital)	1.60% Showing the percentage of total died in the hospital over total admissions in a given time period.	Total admitted patients in a given time period.	Total deceased patients in the same time period where died in hospital. Discharge Method was 4 on PAS.	Total deceased/Total admitted
1-03 MRSA (Hospital only)	4 Hospital acquired MRSA case i.e. post 48hrs admission.			Count of post 48hrs MRSA case in a given time period.
1-04 C.Diff (Hosptial only)	33 Hospital acquired C. Diff case i.e. post 72hrs admission.			Count of post 72hrs C.Diff case in a given time period.
1-05 Mortality from C.Diff (patients with C.Diff who die)	6% The percentage of the observed number of deaths at a given trust to the number of admissions for a particular C.Diff diagnosis.	Every finished inpatient spell at an acute trust for C.Diff diagnosis, ICD 10 code 'A047'.	Total death of every finished inpatient spell at an acute trust caused by C.Diff diagnosis. Discharge method=4 and diagnosis='A047'.	Total C.Diff Deaths/Total C.Diff Admissions
1-06 Mortality from VTE (patients with VTE who die)	0.35% The percentage of the observed number of deaths at a given trust to the number of admissions for a particular, VTE diagnosis.	Every finished inpatient spell at an acute trust for VTE diagnosis, ICD 10 code '180*', '181*', '182*' and '183*'.	Total death of every finished inpatient spell at an acute trust caused by VTE diagnosis. Discharge method=4 and diagnosis='180*', '181*', '182*' and '183*'.	Total VTE Deaths/Total VTE Admissions
1-07 Mortality from Hip fractures - (patients with Hip Fractures who die) 1-08 National Patient Survey (Top 20)	4.60% The percentage of the observed number of deaths at a given trust to the number of admissions for a particular, Hip Fractures diagnosis.	Every finished inpatient spell at an acute trust for hip fractures diagnosis, ICD 10 code 'S72*'.	Total death of every finished inpatient spell at an acute trust caused by hip fractures diagnosis. Discharge method=4 and diagnosis='S72*'.	Total Hip Fractures Deaths/Total Hip Fractures Admissions
1-08 National Patient Survey (10p.20) 1-09 Patient Satisfaction (NetPromoter Score)	90%. NPS is based on the fundamental perspective that every company's customers can be divided into three categories: Promoters, Passives and Detractors. By asking one simple question – How likely is it that you would recommend to a friend or colleague? You can track these groups and get a clear measure of your company's performance through its customer's eyes. Currently the NPS is calculated assuming patients that respond "YES" are promoters, those that respond 'NO' are detractor. The "Possibly" are passives and therefore removed from the calculation. The band fro Detractors is wide – scoring from 1-6 of the ten possible options. Passives score 7-8 and the Promoters 9-10.	Promoters: Currently the NPS is calculated assuming patients that respond 'YES' are promoters	Detractors: Detractors: those that respond 'NO' are detractor	NetPromoter Score=%Promoters-%Detractors
1-10 Formal complaints	320			Straight count of formal complaints of the month
1-11 SUIs	14			Straight count of Serious Unwanted incident of the month
1-12 Falls - resulting in significant injury (grade 3)	14			Straight count of falls grade 3 and above.
1-13 Hip fractures treated within 36 hrs	85% The percentage of the Hip fractures patients who were treated within 36hr of admission at the trust to the total number of hip fractures admissions.	Total patients with hip fractures.	Total patients with hip fractures treated within 36 hrs plus delayed patients because medical reasons.	Sum(Total hip fractures admitted patients treated within 36 hrs plus delayed patients for medical reasons)/Sum(Total hip fractures admitted patients) Sum (Total Deaths in 1-02/03/04/05/06/07; total complaints, total
1-14 Summated Adverse Report Index (SARI) 1-15 Average Bed Occupancy	1552 94%	Count of daily trust beds total.	Count of daily trust occupied beds total	Sum (Total Deaths in 1-02/03/04/05/06/07; total compiaints, total Sulfe, total Falls, total breach, of Hin fractures not treated within Sum(Count of daily trust occupied beds total)/Sum(Count of daily trust
